AI Use Declaration for RepSync

Azwidali Manyaga | ST10440560 | OPSC6312

5 November 2026

I used OpenAI Codex to assist with developing RepSync for this school assignment. AI generated and revised code and resources, particularly for language support, notifications and debugging (OpenAI, 2026).

Languages: AI helped translate interface text into isiZulu and Afrikaans and implement the language picker alongside English. Android documentation supported the use of separate language resources (Android Developers, n.d.).

Notifications: AI helped configure Firebase Cloud Messaging, notification permissions and connection troubleshooting. I completed the Firebase Console setup and confirmed that a test notification arrived on my Android phone (Firebase, n.d.).

Debugging: AI helped interpret errors and suggest changes to build settings, configuration and interface code. I supplied screenshots, reported problems and tested the results on my phone.

AI also supported other development tasks and drafting this declaration. I selected requirements and carried out practical setup and testing. I remain responsible for understanding the submitted work, checking generated material and acknowledging AI assistance.
